Key features include: A section on financial analysis - a Corporate Financier must

The balance between theory and practice makes this book an excellent tool for Investment Bankers and other finance professionals, as it covers both basic as well as more sophisticated topics. Particularly impressive is their commitment to continuously updating material, as well as the regular publication of a newsletter containing timely articles on various current finance topics. The possibility of asking questions to the authors and effectively receiving in-depth answers for free is a very valuable feature. I sincerely recommend this text." Amazon.co.uk 31 October 2005 "An excellent book for all business students - For a few months already, the Vernimmen.com website had been helping me for my finance class, as well as the monthly newsletter. I finally bought the book, and I have not been

disappointed: the style is clear, very practical ; theories are mixed with real cases, which makes them easy to understand. Valuation techniques are well explained (discounted cash flow methods, methods based on ratios). Fundamental concepts (accounting, finance, financial markets) are recalled in the first part; when more complex concepts are tackled (investment analysis, LBOs, capital structure...), they are explained with lots of simplicity and conciseness. I recommend this book for every student in Management or Finance!"

Financial Management in Construction Contracting - Andrew Ross 2013-01-29

This authoritative text provides a detailed insight into how construction companies manage their finances at both corporate and project level. It will guide students and practitioners through the complexities of the financial reporting of construction projects within the constraints of accepted accounting practice. The book is written for non-accountants and from a

contractor's perspective and is equally relevant to subcontractors and main contractors. The authors examine the relationship between the external annual accounts and the internal cost-value reconciliation process. CVR is covered in depth and the authors consider issues such as interim payments, subcontract accounts, contractual claims, final accounts, cash flow management and the reporting of the physical and financial progress of contracts. A broad perspective of all the financial aspects of contracting is taken along with related legal issues and the authors explain how things operate in the 'real world'. They describe good practice in financial control while at the same time being honest about some of the more questionable practices that can - and do - happen. The approach taken is unique as the financial management of construction projects is considered from the perspective of the contractor's quantity surveyor. The book deals with the real issues that surveyors have to

address when using their judgment to report turnover, profitability, cash flow, and work in progress on projects and the financial problems faced by subcontractors are frankly and pragmatically explored. The payment and notice requirements of the Construction Act are explained in detail and relevant provisions of JCT2011, NEC3, ICC, DOM/1 and other standard contracts and subcontracts are also covered. Financial Management in Construction Contracting addresses the wide variety of external factors that influence how construction companies operate, including government policy, banking covenants and the financial aspects of supply chain management. Cost reporting systems are described and real-life examples are used to illustrate cost reports, accrual systems and how computerised systems can be employed to provide the QS with information that can be audited. Examples drawn from practice demonstrate how work-in-progress (WIP) is reported in contracting. Cost

value reconciliation reports are featured and the book demonstrates how adjustments are made for overmeasure, undermeasure, subcontract liabilities and WIP as well as explaining the processes that contractors use when analysing external valuations. This is the ideal core text for final year degree and post-graduate level modules on Quantity Surveying, Commercial Management, Construction Management and Project Management courses and will provide an invaluable source of reference for quantity surveyors and others who may be engaged in the financial management of construction projects. The book's companion website at www.wiley.com/go/rossfinancialmanagement offers invaluable resources for students and lecturers as well as for practising construction managers: end-of-chapter exercises + outline answers PowerPoint slides for each chapter ideas for discussion topics links to useful websites
