A Goldstar Century - Ian Hall 2015-10-30

Number 31 Squadron RAF will celebrate its centenary in 2015; a pivotal milestone for a Squadron engaged at the forefront of military activity for the past 100 years. With a number of events lined up to celebrate this important anniversary, former Commanding Officer of the Squadron, Ian Hall, has set himself the ambitious task of penning the Squadron's entire history, from formation right up to current-day activities. This lively and informative narrative is interspersed with first-hand accounts taken from interviews conducted with the men who made/make up the Squadron. The first twenty-five years of the Squadron's history were spent on India's North-West Frontier, hence the Squadron motto 'First in the Indian Skies'. During the Second World War, it was occupied mainly in the Middle East and North Africa, before moving to the Burma theatre for the remainder of the war. Upon returning to the UK in 1948, the Squadron performed communications duties until, in 1955, it joined the Cold War in West Germany, operating successively in reconnaissance and strike/attack roles. Operational deployment in recent years has seen the Squadron deployed during the Gulf War, the Iraq War, in Kosovo, and Afghanistan. With troops pulling out of Afghanistan in 2014, 31 Squadron have now completed a circular history, and there seems no better time than now to commit it to print. Each and every facet of this long and varied history is relayed in a style that serves to provide an account that is at once celebratory and objective when it comes to recording not only

the facts of the various deployments but also the personal stories of the men behind the headlines.

Microwave Materials - V.R.K. Murthy 2013-03-14

Solid State Materials have been gaining importance in recent times especially in the context of devices which can provide necessary infrastructure and flexibility for various human endeavours. In this context, microwave materials have a unique place especially in various device applications as well as in communication networks. Various technological developments are taking place in fine-tuning these materials for specific applications and in fixed band frequencies. Though the science and technology of these materials has reached an advanced stage, systematic attempts are still lacking in bringing all available information in a single source. The present volume is a modest attempt

in this direction, though it cannot be considered to be the one that satisfies completely desired components and information required. The editors have enlisted certain articles of interest in this area, especially those dealing with measurement techniques, chapters dealing with materials like Ferrites, YIGs, Radome and high Tc superconducting materials which are of current interest. The editors are fully aware that the coverages are not comprehensive either in scope or in depth. The purpose of this volume is only to acquaint oneself of certain aspects of a fast developing field. The editors will be grateful for any comments or suggestions in this endeavour. V. R. K. MURTHY S. SUNDARAM B. VISWANATHAN Contents Preface v 1.
